

Company policy

For over fifty years, we have been providing precious galvanic finishes for accessories mainly in the fashion, leather goods, and footwear sectors. Our ambition is to grow as a partner of fashion houses and provide solutions that enable the creation of products with a unique design.

We believe that beauty is a value capable of inspiring and stimulating imagination.

We consider creativity, quality, research, sustainability, and respect for the local territory to be non-negotiable and essential values in pursuing our vision for growth.

We believe in the tangible value of craftsmanship, enhancing the professionalism of every individual equally, without distinctions based on age, gender, or nationality.

We do this with our eyes set on the future, supported by more than half a century of experience.

We are committed to the values of transparency and openness, welcoming clients, schools, universities, and local institutions — and beyond — in order to promote and continuously elevate our Italian know-how.

Our commitment is focused on:

- experimenting with innovative and distinctive finishes, developed together with our clients to transform accessories into valuable objects;
- inspecting every single piece before processing it, thanks to trained and meticulous personnel and a laboratory capable of testing and monitoring with exceptional expertise;
- meeting the requirements, needs, and expectations of the market, employees, suppliers, and all other stakeholders, in order to achieve their full satisfaction, trust, and loyalty, while complying with all applicable mandatory and voluntary compliance obligations relevant to our organization;
- continuously improving the company management system, its processes, and its performance in every area;
- ensuring a safe, secure, and clean environment by eliminating hazards and reducing risks, providing safe and healthy working conditions to prevent injuries and illnesses for those who work with us and those around us, encouraging consultation and participation among workers, preventing environmental pollution, minimizing impacts generated by our activities — particularly regarding waste and atmospheric emissions — and protecting the “Stagni di Casale Alberto Carta” natural oasis managed and safeguarded by WWF.

Starting from 2026, Bedin Galvanica extends its field of activity to galvanic treatments dedicated to components for medical devices.

In this area, Management undertakes the following commitments:

- ensuring patient safety as a priority value in every decision related to the treatment processes of components intended for medical devices;
- complying with all applicable regulatory and legislative requirements for medical devices, with particular reference to Regulation (EU) MDR 2017/745 and ISO 13485, while ensuring constant updates in line with their evolution;
- validating, monitoring, and maintaining under control the galvanic processes dedicated to components for medical devices, guaranteeing repeatability, compliance, and full traceability of every processed batch;
- collaborating transparently and proactively with medical device manufacturers by providing the technical documentation required to support their regulatory obligations.

Periodically, within the framework of Management Reviews, specific, measurable objectives consistent with the commitments outlined above are defined, identifying the related responsibilities, operational methods, and resources necessary to achieve them, in full respect of the principles and values that have always distinguished Bedin Galvanica.
